Professional Summary

Aspiring AI Engineer with hands-on experience building production-focused LLM applications and agentic systems. Proficient in Python, PyTorch, and modern AI frameworks including LangChain and LangGraph. Skilled in developing RAG pipelines, prompt engineering strategies, and vector-based retrieval systems. Demonstrated ability to deliver AI-powered solutions from concept to deployment, with experience in backend integration, real-time inference optimization, and system-level AI design. Currently pursuing BSc in Information Technology specializing in Data Science.

Technical Skills

Programing: Python, Java, TypeScript, C#, C++
Frameworks: React.js, MERN, .NET, Angular
Python Libraries: NumPy, Pandas, Scikit-learn, TensorFlow, Matplotlib, PyTorch, PyAudio, TF-IDF, NLTK, faster-whisper
AI & Agentic Systems: LangChain, LangGraph, RAG Pipelines
Database: SQL, MongoDB, SQLite, ChromaDB
Tools: GitHub, Git, AWS, Azure, Jira, VS Code, Visual Studio, Android Studio, Postman, SQL Server Management studio, Redux TK

Professional Skills

- Agile teamwork
- Problem Solving
- Time management under deadline
- Stress management
- Fast learning
- Adaptability and flexibility

Professional Experience

Project Third eye Trading: Worked with an client via Upwork, primarily handling C# backend development, including real-time communication using SignalR and WebSockets, resulting in a 30% improvement in live data updates, Coordinated with a React.js frontend.

Project

Stock Prediction Model (Python, NumPy, Pandas, yfinance)
Developed a real-time stock forecasting application using LSTM (Long Short-Term Memory) networks and a Streamlit dashboard. Engineered a persistent SQLite database for efficient historical data management and implemented automated data synchronization via Yahoo Finance API. Integrated model retraining capabilities, performance tracking (MAE/RMSE), and multi-step future price projections to enhance predictive accuracy and user interaction.

Arfy AI - Personal Voice Assistant (Python, PyTorch, LangChain, LangGraph, PyQt6, OpenGL)
A personal AI voice assistant that learns and grows with you. Powered by Groq LLaMA-3.3-70B with faster-whisper speech recognition, owner-only voice authentication, and Edge TTS. Uses a hybrid LangChain + LangGraph agent system for smart command handling — covering Spotify, app control, weather, web search and persistent memory. Features a floating UI with a real-time animated OpenGL orb and system tray integration.
Currently working on a ChromaDB RAG pipeline for smarter memory retrieval.

Movie Review Sentiment Classifier (Python, Scikit-learn, NLTK, Streamlit, TF-IDF)
Built an end-to-end sentiment analysis application that classifies movie reviews as positive or negative using machine learning, with an interactive web interface for real-time predictions and feature-level interpretability.

Snazzy – E-Commerce System with Secure payments & Ai powered Chat (MERN, Stripe, Groq)
Developed a MERN e-commerce platform with secure JWT authentication, advanced product filtering, and Stripe integration for one-time purchases, subscriptions, and webhooks. Implemented a real-time AI chat support system running on Groq for low-latency inference, plus an admin dashboard to manage products, promotions, users, and orders with optimized API performance.

Medy App - Daily Habit, Mood & Hydration Tracker (Android, Kotlin, MVVM)
Daily Habit, Mood & Hydration Tracker (Android, Kotlin, MVVM) Kotlin-based wellness app featuring mood journaling with personal diary, daily habit tracking, and hydration monitoring with automated reminders. Visualizes progress through intuitive graphical charts with a clean, user-friendly interface focused on simplicity and consistency.

Certifications

- AI & ML SLIIT
- Microsoft Azure Data Fundamentals (DP-900)

Education

- **BSc (Hons) in Information Technology Specializing in Data Science(UG) | Nov 2023- 2027** - CGPA: 3.3 / 4.00
- **G.C.E. Advance Level-2022 (Science Stream)**
- Sivali Central College Ratnapura - 3 | Passed With 3 S ‘ s
